Adjustable Union Fitting: Optional Adjustable Union (shown below) easily adjusts the stem to the full depth of your thermowell for metal to metal contact, giving maximum exposure to your process. Eliminates the need to stock several different stem lengths.

Standard Styles and Dial Sizes: Popular Back Connected and versatile All Angle case styles in easy-reading 5" and space-saving 3" Dial sizes.

Ranges and Stem Lengths: Models for every application. Fahrenheit ranges from -100° up to 1000° and Celsius ranges from -50° up to 500° are available. Stem lengths up to 24" are standard with specials up to 60". Minimum stem length of 6" on Adjustable Union.

ASME B-40.3: Meets standards set by the American Society of Mechanical Engineers.

Rugged Design Features: All 304 stainless steel exterior parts with instrument glass lens (plexiglass option). Optional 316SS Case, Fitting and Stem, or Fitting and Stem only. Quick-lock, cam-action bezel ring with heavy duty, heat-resistant hermetically sealed gasket seals out moisture to prevent lens icing or fogging. Prevents bimetal coil freeze-up in extreme conditions. Built-in over-range protection and adjustable pointer are standard.

Accuracy: Accuracy is within 1% of full scale.

Easy Reading: Dials are specially fabricated of low-glare finished metal using a deep draw design for anti-parallax alignment of pointer to graduation marks. High-visibility numerals and graduations also help minimize reading errors.

Fast Response: Superior heat transfer characteristics, fast response, and consistent repeatability are achieved through the use of a high-torque, low mass bimetal sensing element. Materials and design combine to convert the sensor's movement quickly and accurately into a dial reading.
